

A. PO: replicate scaled error by subgroup
Replicates as $(\text{estimate} - \text{truth}) / |\text{truth}|$ at N = 20,000 (trimmed 1st–99th percentile)

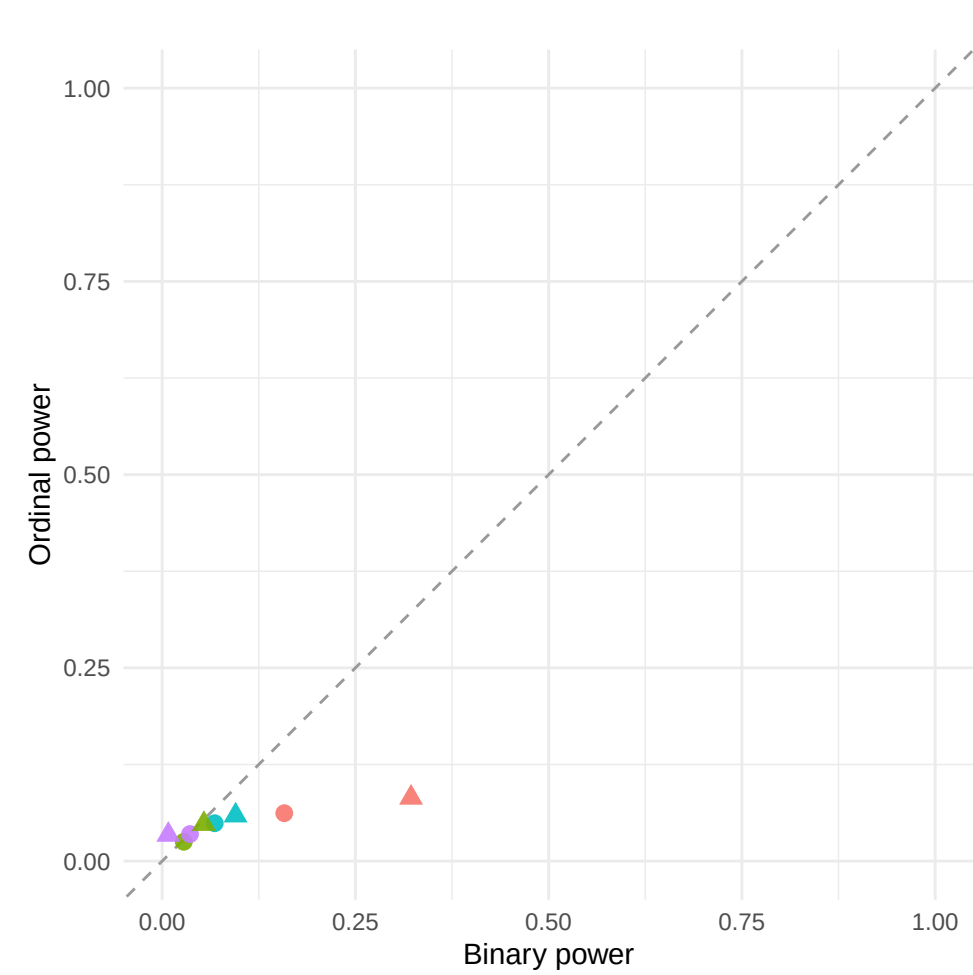

B. PO: power comparison at N = 3,000
Points above diagonal indicate ordinal power gain

C. nonPO: replicate scaled error by subgroup
Replicates as $(\text{estimate} - \text{truth}) / |\text{truth}|$ at N = 20,000 (trimmed 1st–99th percentile)

D. nonPO: power comparison at N = 3,000
Points above diagonal indicate ordinal power gain
